Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

The frame house is a two-story structure constructed in a rectangular plan. It is a four-bay by one-bay structure which has a remodeled main facade. The main element in the remodeling is a concrete block garage in the westernmost bay. The main facade has a central entrance and a three-sided bay window in the easternmost bay. There is a full-length, one-story front porch. The structure has a gable roof with a centrally located chimney. The structure appears to date from the mid-to-late 19th century.

The property is located on the north side of Sandy Hook Road, approximately .24 mile west of Clark Road, in Sandy Hook. The structure sits slightly back from the road. The main facade faces south.

The two-story structure is constructed of frame covered in asphalt shingle. The main facade is asymmetrically arranged. Remodeling of the structure includes construction of a concrete block car garage with large garage door in the westernmost bay. The structure has a central entrance with two-pane transom. The easternmost bay contains a three-sided bay window with one-over-one sash windows. The east side retains a front porch of square posts and stick railing. The front porch runs the full-length of the house and has a shed roof covered in sheet metal. The four-bays on the second story contain one-over-one sash windows with plain trim and pointed-arch cornice. The corners of the structure have corner boards. The gable ends are unfenestrated except for one-over-one sash windows in the gable. The roof is covered in sheet metal. There is a centrally located brick chimney rising from the peak of the roof.

There are no significant outbuildings on the property.
